Hand Rehabilitation Robot

Syrebo® hand rehabilitation system combines soft robotic exoskeleton technology and neuroscience, integrated with active and passive training programs, covers all stages of hand rehabilitation, helps patients to relearn and recover hand motor functions. Provides professional clinical training and evaluation record to hospitals, communities, and families.

Safe & Easy use

- Light-weight and Handle equipped

Carriable in different scenarios.

- Safe & Flexible

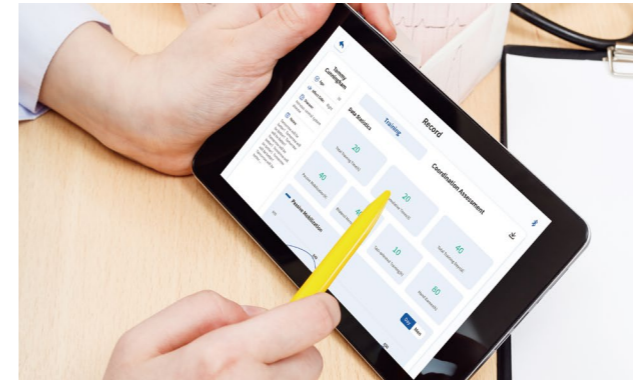

60 grade adjustment, pneumatic flexible glove, reduces spasm and avoids secondary injury.

Intelligent User Management

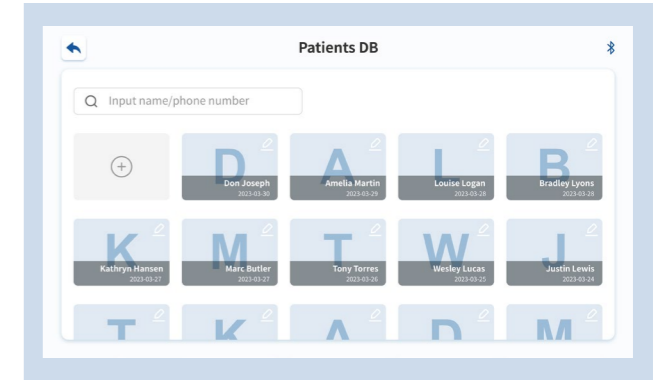

- Possibility of Remote Rehab/Tele-Rehab

Doctors can set professional training plan remotely through a clinical recommendation App.

- Individual User Management

Bulid their own individual record, easy customization of training plans.

Mutiple Training Mode

- Passive/Assistance Training:

Built-in sensors assist weak movements to completion, help build the correct movement intention.

- Bilateral Mirror Training:

Dysfunctional hand move along with healthy hand, activate and reconstruct the network of mirror neuron.

- Functional Task Training:

Improve user's cognition & ADL learning by multiple interesting games.
